

BEMER Physical Vascular Therapy - New discoveries in medicine for chronic illness and painful conditions

The universal miracle cure is still a great dream of mankind. Yet ambitious and visionary scientists are coming ever closer to realising this dream. At the Institute for Microcirculation in Berlin, a research team led by CA. Dr. med. Rainer Klopp has succeeded in achieving a ground-breaking stride after twelve years of research work. With advances in science techniques the research team developed a physical therapy process which selectively responds to the microcirculation regulation mechanisms in the human body and positively influences them.

Blood flow through the smallest blood vessels, also called microcirculation, is functionally the most important part of the human circulation system and fulfils vital transport functions: it provides the tissues and organs with oxygen and nutrients and removes metabolic waste products and boosts the immune system. A limited or malfunctioning microcirculation causes the cells to age faster and is the cause of many conditions of poor health as well as illness and impaired healing and recovery.

The marvel of science and research

Heart circulation is a system most people know. 100,000 km of blood vessels flow through the body. 74% of the blood flow takes place in the smallest micro vessels arterioles, capillaries and venules. An average heart pumps 1.3 gallons (5 Liters) per minute. The heart alone cannot generate the full pumping capacity needed to supply capillaries. So a naturally-occurring pulsing rhythm of the vessel diameters (vasomotion) enables and controls the distribution of the blood throughout the gigantic network of the capillaries. In a healthy young person, the vasomotion movements take place three to five times per minute; in those who have a chronic illness once a minute, in the old and frail this occurs once per ten minutes. In order to improve the feeling of well-being and to achieve health, low-level "pulsing" must be stimulated.

BEMER Physical Vascular Therapy

Test BEMER Physical Vascular Therapy. Two, eight minute sessions per day can open up your microcirculation by 30%.

From the day you are born blood flow supports all healthy cell function. It is the foundation for living life to its fullest. Without it your cells suffer and this can lead to all sorts of disorders as you age.

Record performance from medical research

It has taken many years of research to discover that we could stimulate both superordinate and local regulation vasomotion mechanisms successfully using specifically biorhythmically defined signal stimuli. This stimulation or normalisation of the pulsing has been successfully achieved with the help of a physical, multi-dimensional signal structure, which is like an externally-used microvessel

pacemaker; the reduced or malfunctioning microcirculation can be effectively revived. Therefore, this new technology completely supports, highly effectively and without side-effects, one of the most important bodily regulation mechanisms for prevention as well as for the healing, recovery and regeneration processes.

New hope for chronically ill and cases where all the therapy options are exhausted

The BEMER devices open up new doors for modern medicine. During the therapy of illness and painful conditions, the therapy successes are amazing and are documented in many widely recognized studies. The therapy devices are medically certified and their effect is scientifically documented and is widely recognised worldwide.

Would you like to improve in your health?

With regular BEMER Physical Vascular Therapy use, inflammation can be reduced, the immune system is strengthened, you feel less aches and pains, sleep better and have a lot more energy.

Physical Vascular Therapy

BEMER uses copper coils to transport a weak pulsating bio-rhythmical signal to stimulate vasomotion. The core of BEMER technology is a physical electro-magnetic signal that stimulates *microcirculation* to enhance blood flow , also called vasomotion. BEMER moves more nutrients, water and oxygen **in** and metabolic waste **out** of tissue and organs.

Federal Drug Administration Approval

BEMER Physical Vascular Therapy is a Food and Drug Administration Registered Class I Medical Device. This ground breaking innovation in alternative medicine has been used for over 16 years in Europe with proven effectiveness and safety. BEMER (Bio Electro Magnetic Energy Regulation) is the only pulsed electromagnetic field (PEMF) device in the United States that has been approved to conduct research on human subjects. NASA is placing BEMER technology in space suits. BEMER is the most researched low-level pulsed electromagnetic field device in the world.

Test BEMER Physical Vascular Therapy

The two equipment sets **BEMER Classic** and **BEMER Pro** are easy to operate and designed for use in clinics and practices as well as, for private use in the home. The application is incredibly simple and comfortable. **Two, eight minute sessions per day** can open up your microcirculation by 30%.

Please take a bit of time to learn about and try BEMER Physical Vascular Therapy. You don't need to believe in it to try it. You will observe for yourself the wonderful effects it has on your body over time.

Questions about the use and effectiveness are welcomed.

About BEMER

The first BEMER Physical Vascular Therapy system was launched onto the market on 1998; it was developed further and relaunched in 2007 with an improved signal. Since December 1998 we have collected over 5000 testimonials and letters from users all over the world whom the BEMER system has verifiably helped. BEMER Physical Vascular Therapy represents a ground breaking innovation for modern alternative medicine. The company's headquarters are in Triesen, Liechtenstein. BEMER America is located in San Diego CA.
